

Why Sidmar's RejuvaWave FB100 and FB200 are the Best Full Body Hydromassage Tables Made.

- The warmth you feel when laying on a water filled mattress is more soothing and relaxing and is much more beneficial to your body than laying on air. Water conducts 24 times more heat than air making our table's heat therapy superior to water through air systems.
- Our tables are quieter than competing brands. Water spraying through water and impacting the massage surface produces much less noise than water through air systems. This is good for your business environment as well as the person using the table.
- We massage at least 50% of the body at a time while our competitor's traveling jets only massage the area where the water is spraying (think car wash). The result is our tables provide much more therapy during each session than any traveling jet system.
- Our intuitive controls require no training. This makes new users more comfortable and saves your employees time.
- No annual or semi-annual draining and cleaning like our competitor's water through air systems. This saves you time and a lot of money as these cleanings typically cost \$500.
- We have the simplest design which results in higher reliability. Our "No Technician Required" approach allows for self-servicing which saves you money. Everything is plug and play making it easy to replace any part of the table. Customer service is always free through our 800 number no matter if you bought the table new or used.
- Unlike our competitors, we post our prices on our website. We offer the lowest total cost of ownership of any brand (least initial cost and least maintenance costs over time).
