

Overview of the Massage Controls on the RejuvaWave Full Body Hydromassage Tables

Controlling the Table

The Increase button increases the time in single minute increments.

The Decrease button decreases the time in single minute increments.

Start/Stop simply starts and stops the table. When you press start, the table will begin operating. The table will shut off automatically when the timer reaches 0.

The timer remembers what your last session was set to. By simply pushing the Start/Stop button, the timer will be automatically set to your last session time and the massage will start.

You chose what to massage by cycling through the massage zones using the Massage Zone button.

Turn the pressure control knobs to adjust the massage pressure. The back and legs are controlled separately.

There are 5 Massage Zones available on the FB100 model. There is an additional Full Body Massage Zone on the FB200 model which allows both the back and the leg jets to operate at the same time.
