

Instructions for Adding Clar-Lub Conditioner – Available only from Sidmar at 800-330-7260

Clar-Lub stands for clarifying lubricant and was specifically formulated for use in hydromassage tables. It lubricates all moving parts within the water, prolongs the life span of the vinyl mattress, coagulates impurities so they don't deposit on internal components and suppresses the growth of algae.

How to Add Clar-Lub to Your Hydromassage Table Add one bottle every 3 months for business use or every 4 months for home use.

1. Remove the cloth cover from over the water mattress.
2. Remove the cap and seal from the fill spout. *(The fill spout may be pulled upward as shown to make filling easier.)*
3. Shake well and pour entire contents of the bottle into the water mattress.
4. Remove any air from the water mattress. *(This can be done by sweeping your arm across the mattress, starting at the seat cushion and moving toward the fill spout.)*
5. Replace the seal and cap and push the fill spout back into the water mattress.
6. Wipe off any spilled Clar-Lub or water from the table.
7. Replace the cloth cover.

TIP: It is normal for water to evaporate through the vinyl mattress. As the water evaporates, the water level goes down. When the water level gets low enough, you will hit the jets more when you lay on the table. The top of the water mattress should be the same height as the seat cushion. If it is lower than that, add distilled water through the fill spout. *(Operating your hydromassage table without enough water may cause damage to the jets.)*
